| | Hotel Management System [HMS] Software Requirements |
| | Specification [SRS]: |
| | ·Goal. Develop a Software Interface for HMS. |
| | 1. Introduction: |
| ٠., | -> Purpose of this doc.: To provide a comprehensive |
| , | understanding of the requirements & functionalities of the |
| | -> Scope of this doc. Describes the intended users, feature |
| | and benifits of HMS, along with development cost & time |
| | estimates. |
| | -> Overview: Gives a brief summary of HMs, outlining its |
| | primary functions such as room booking, check-in/out & the |
| | Willing: |
| | the part of the second the second of the second |
| , - | 2. General Description: |
| | - Objective: To automate & streamline hotel operations, |
| | improving afficiency & guest experience. |
| | - User Characteristics: Front desk staff, housekeeping, quests. |
| | - Features: |
| | · Room booking. Allows guests to book rooms online. |
| | · Check-in last: Facilitates check-in last process for quests. |
| | · Inventory Management: Keeps track of available room, |
| | · cleaning status & supplies. |
| | · Billing: Handles invoices, payments & accounts. |
| | · Importance: Makes guests happier, conns more money, |
| | E uses resources better. |
| | · User Community: Hotel staff & guests, with varying lands |
| | of access & priviliges. |

- 4. Interface Requirements: ·User Interface: Intuitive interfaces for etaff & quests, accessible via web browsers or mobile apps.
- · Payment Integration: Integration with payment gateways for secure online payments.
- · Communication: Email potifications for booking confirmation reminders & feedback requests.
- 5. Performance Requirements: · Response Time: System should respond promptly to user
- · Availability: System should be available 24/7, with the scheduled maintainance mindous communicated. · Scalability: Ability to handle peek loads during high-demand periods.
 - · Hardware / Software Limitorions: · Compatability with existing infrastructure.
 - · Support for multiple plantorms.
 - · Regulatory Compliance.

6. Design Constraints:

· Compliance with data protection regulations & industry

standards.

- 7. Non-tunctional Attributes!
- · Encryption of sonsitive dottain
- · Reliability: Robust & resiliant system with failurer mechanisms
- · Usability: Intuitive user interfaces.
- · Scalability: Architecture should support growth in user bould transaction volume.
